

ER diagram

Changes:

- 1) Student.gender attribute name has been changed to Student.race since this title seems more appropriate for the set of values (witch, wizard)
- 2) Changed the entity name Family to Relative, since it is more descriptive of the purpose of the entity.
- 3) Changed the Student-Relatives weak relation to a 1-many relation. As discussed, will be maintaining the records of students whose relatives are also students as multiple records.
- 4) Changed the entity name Clubs to Organisations as it is more descriptive of the purpose of the entity
- 5) Added a weak entity Pets of the entity Creatures as per suggestion.
- 6) Added entity CourseOffering in place of Courses, and removed the tertiary relation linking staff-course-students for the two relations "registered" and "taughtby" as per suggestion. Removing the Course entity because after adding CourseOffering it had only one attribute-name. The courseoffering entity also has course name that is fairly descriptive enough.

Data Ingestion:

Data was populated using the Insert statement. Some amount of data cleansing was done in Excel using available formulae before the insertion.

20 Questions:

How many students play the sport Quidditch?

```
select count(studentid)
from organisationsrel natural join organisations
where activity = 'Quidditch'
```

count
11
